1 In This Release

This is the 02.12.05.XX release of EDMA3 Driver and contains libraries, sample initialization libraries, standalone sample applications and support documents.

This release contains sample OS adaptation layer for BIOS 6, which could be used by BIOS 6 based applications.

2 Out-of-Box Contents

edma3_ild_02_12_05_30B.tar.gz contains following:

1.
 - Source code for EDMA3 Resource Manager, Driver and other necessary abstractions.
 - Project files (DSP/BIOS™), Code Composer Studio (CCS) build files, XDC package.bld files (for supporting getlibs function) and all Makefiles and Makefiles, to build EDMA3 package in host environment. Please note from this point of time, libraries can be built using Makefiles only. Hence libraries need to be built through command prompt using gmake command (Please refer the user guide available with this release for detailed build instructions).
 - The above mentioned items are located inside the <installation dir>\edma3_ild_02_12_05_XX\ directory.
 - Please note that the CCS setup files and GEL files are NOT provided with this release and this would be available with latest CCSv6 releases or from EVM manufacturer.
2. Release Notes (this document) providing an overview of this release.
3. User Guide and data sheets.
4. EDMA3 Driver API (generated) documentation in CHM format.

3 Known Issues

1.	Instrumentation (all components)
Release Note	
Instrumentation code is not yet implemented as the XDC/CCSv4 version at the point of development did not support RTA and instrumentation APIs.	
Workaround	
None	

2.	EDMA3 hardware doesn't works properly in FIFO mode with all the controllers.
Release Note	
Very few peripherals support EDMA3 FIFO mode. EMIF controller doesn't support the same. So EDMA3 CANNOT be used in FIFO mode for doing a mem-2-mem data transfers, EDMA3 being configured in the FIFO mode. Applications trying to use EDMA3 in FIFO mode should first check their respective peripheral-controller document for this mode support.	
Workaround	
None	

3.	PingPong Example Fails for certain EDMA instances for some DSP cores in Release mode only.
Release Note	
PingPong example fails for certain EDMA Instances for some DSP cores in Release Mode only. It passes in the Debug mode.	
Workaround	
None	

4.	ARM 9 support for OMAPL138 is not available on Make based build of EDMA3LLD
Workaround	
None	

5.	EDMA3 fails for Certain Big Endian Simulators
IR# SDSCM00039169 EDMA3 Example fails for following Big Endian Simulators: tci6608-sim/tci6616-sim	
Workaround	
None	

6.	K2 EDMA3 LLD examples are broken
IR# SDOCM00121404 EDMA LLD K2G examples have build error	
Workaround	
None	

4 Limitations

None.

6 Others

EDMALLD is MISRA C compliant for TDA2x, TDA3x, DRA72X and TI814x platforms.

For platforms AM572x, DRA75x_74x, TDA2XX, AM571x, DRA72XX, and TDA2EX, currently they all share a single device name of DRA7XX and a single DRV sample library under [edma3lld_install_dir]/packages/ti/sdo/edma3/drv/sample/lib/tda2xx-evm directory. Therefore, for applications using a custom RTSC platform, please use "DRA7XX" as the "deviceName". For applications using makefile, please link the library under the tda2xx-evm folder.
